

Peltor Blue-Line Communication Solutions

Technology Protecting People

Aearo Technologies provides safety products for the head, eyes, face and ears, which help improve comfort and enjoyment for those who work in dangerous environments.

The Aearo product range is the most complete one on the market today. Our products not only make your working environment safer, they also help make it more comfortable and pleasant.

The well-known Aearo brands are found in workplaces all around the world, and we are constantly developing new products to enhance security for users.

Peltor, a world leader in hearing protection and communication

For over 50 years, Peltor has spearheaded the development of protection and communication systems for everyone who spends time in noisy environments. We are proud that we control the entire production chain – from concept and testing to the finished product.

This is a quality guarantee for our customers, and ensures the best technology to make optimal use of, and continue to expand, our broad experience.

Peltor's extensive know-how ensures a leading position for us as suppliers of hearing protectors and communication products for the manufacturing and process industries, aviation, military and motor sports.

Communication solutions for extreme environments

Peltor Blue-Line is a series of ATEX products designed for extreme environments. Developed in close collaboration with demanding users, these products have undergone rigorous testing in harsh environments. The results prove that we can meet the demands and make communication easier and more reliable despite external factors. Our solutions work!

Lite-Com Pro

Programmable wireless communication headset

Versatile

The new Peltor Lite-Com Pro is a communication headset with high attenuation ear protection and a built-in short range communication radio for integration with industrial or other professional radio communication systems.

The noise cancelling microphone is mounted on a new microphone boom type. VOX function facilitates hands-free operation, while the PTT button makes it possible to communicate in extremely noisy areas, or whenever “push-to-talk” is wanted.

Programmable

Up to 30 radio channels are programmable in the 430–470 MHz frequency range with Peltor Radio Software. The selective squelch function with CTCSS tones or DCS digital codes, allows multiple users to work on the same channel without listening to each others communication.

Despite the highly noise attenuating cups for your hearing protection, it is also possible to hear useful sounds from the surroundings; for instance warning tones or a call of distress. Two external microphones pick up the surround sound for internal reproduction in stereo.

The sound level from the speakers is limited to 82 dB, for a full day's use of your headset without problems. You can also communicate with people standing close to in a noisy environment, without jeopardizing your hearing by lifting a cup.

To further increase the possibilities for wireless communication you can connect external electronic equipment to your Lite-Com Pro headset; for instance a cell phone, a communication radio or almost any other audio source. There is also an accessory cable with PTT button to connect for remote control of the radio in the Lite-Com Pro.

Low power

Operating time is up to about 40 hours, depending on the type of battery and mode of use. Standard 1.5 Volt size AA batteries is accepted, except for use in explosive areas, where a specific batteries or the special rechargeable accumulator ACK05 from Peltor should be used. The working range with maximum output power is up to 3 km outdoors, however depending on actual conditions.

Easy to use

There are only four logically positioned function keys to handle all settings. Internal voice messages confirm all changes of modes and settings. The last setting is stored when the unit is switched off.

The Tactical XP

– new options for volume settings

The Peltor Tactical XP protects you from harmful noise and impulse sounds, while allowing and even amplifying ambient sounds such as conversation, machine noises and warning signals.

The built-in functions of the Tactical XP make it quite different from other active hearing protectors: The user can control and vary the volume function for the current situation. Where necessary, ambient noise can be amplified more than any other Peltor hearing protector allows. The Tactical XP lets you hear what you want to hear and block out all harmful noise. Each function and setting is indicated by a voice message.

The Peltor Tactical XP is approved under the ATEX directive with certification code EEX ib IIC T4.

MT1H7F2-07-50

The Tactical XP contains the following functions, which are user-adjustable and indicated by a voice message:

- Volume.
- Balance – especially useful if the user has a hearing impairment in one ear.
- Adjustable shut-off time for the active volume function to return to normal.
- Equalizer that allows the user to filter ambient noise and amplify or attenuate the noise at a given level.
- Volume control on the external input, allowing the user to turn up the sound on incoming signals from 82 dB to 87 dB for brief periods.
- Adjustment of the internal input level, making it easier to connect various types of communication equipment, such as a radio, DECT or mobile phone.
- **Failsafe function allows communication even if the batteries die**
- **Automatic shut-off after two hours of no active functions**

Peltor Wireless Solutions

- A more effective, flexible way to communicate

Peltor Wireless Solutions™ uses the latest Bluetooth technology to make communication in noisy environments easier and more effective. You can always be available – fast, easily and wirelessly. Gone are the problems of the snagging cord, and you can use your telephone or com radio even when they're not in sight.

Peltor WS Headset

Peltor's new wireless communication headset has a built-in Bluetooth circuit that can quickly and easily connect to another Bluetooth unit up to 10 metres away.

- Headband with individually sprung stainless steel wires for an even distribution of pressure around the ears.
- Two-point fasteners for flexible, continuous height adjustment.
- Dynamic lip microphone that suppresses ambient noise.
- Microphone arm with fast and easy adjustment of distance, length, height and angle.
- Optimal acoustically designed high-attenuating shells that provide even more space for the ears.
- Broad ear cushions filled with fluid and foam provide a good seal and low pressure. The cushions are easy to replace.
- Baffle-mounted earphone that allows sound reproduction with the least possible resonance and distortion.

Peltor Adapter – the reliable link

The adapter between the headset and the communication radio is crucial for communication. This is where the PTT button for transmission is, which means that you must always have the adapter within reach and yet out of the way.

The adapter is intended to tolerate rough treatment and harsh climates, day after day. The Peltor Adapter has what it takes. Approved in EX class EEx ib IIC T4.

The PTT button is logically positioned and easy to use, even with thick gloves on.

The adapter is built into a functional, watertight, sturdy shell with no protruding parts and is designed to fit the size and shape of a hand.

A sturdy clamp on the back can be twisted 360 degrees for easy, flexible use in all situations.

The cord reinforcement and chassis jack have been tested to withstand being plugged in, unplugged and bent at least 100,000 times.

The whole adapter, and particularly the contact, is designed to keep moisture away from the electronics.

EX-approved adapters Class Ex II 2 G EEx ib IIC T4
